**OECD INQUIRY ON NATIONAL COLLECTION OF SERVICES PRODUCER PRICES
PRELIMINARY REPORT Part 1:**

Contribution by Bill Cave

The opinions expressed in this paper reflect those of the author and not necessarily those of the OECD nor its Member countries.

OECD INQUIRY ON NATIONAL COLLECTION OF SERVICES PRODUCER PRICES

ABSTRACT

As a contribution to the development work of the Voorburg Group on services producer price indices, this paper reports the outcome of the updating in 2001 of an OECD inquiry on Member Countries' practices in the field of data collection of these prices.

Countries were asked to report on new collections or new plans for collection of services producer prices since July 2000. Supplementary information was requested on the types of prices collected (list, transaction, mark-up, other) by ISIC group of service activity, frequency of pricing and number of price quotations per period were asked for. Countries were invited to indicate for which CPC classes, within each ISIC group, prices are collected. Supplementary information were invited e.g. on types of services (simple, composite, bundled etc) observed and other comments. Information was also sought on new publication of services prices indices and availability of methodological reports on work in this area. A further question was added this year on why services PPI data are collected and who are the principal users.

Responses show continued expansion of activity in 2001 in those countries that undertake this work, but only one new country has joined the ranks of those (now 19 countries in all) who collect these data i.e. Finland. There is a large diversity in both service sector coverage and national practices. Most countries only attempt to cover a subset of service activities, with these prices. Coverage of services products varies among activity groups. In only a few cases are the service products of an activity group well covered and then it is only by small number of countries. There is also variation amongst types of prices collected and types of services priced though transaction prices and simple services are reported most frequently.

OECD is now collecting data on services PPIs as part of its short-term indicators quarterly survey and this raises the question of the future need for this special inquiry on country activity.

ISSUES PARTICIPANTS MAY WISH TO ADDRESS

- i. Is the report an accurate and useful reflection of activity? If not, what changes should be introduced?
- ii. Do countries agree that given the systematic collection of data by OECD through IIS, this survey should cease?
- iii. Is there anything more that OECD or other international organisations might do to further stimulate, assist and harmonise this work.?

Preliminary Report:

OECD Inquiry on National Collection of Services Producer Prices

INTRODUCTION

1. There is a considerable effort being undertaken, in a significant number of national statistical agencies, to develop the collection of data on services producer prices. Some agencies have focused exclusively on prices of services provided to enterprises, while others have approached the subject more broadly through the development of services producer price indices. In order to measure the real output of services, it is seen as necessary to improve the range of deflators appropriate to particular service products. This need is accentuated by the growing weight of service sector output in GDP seen in most economies.
2. Further the UN Statistical Commission in 1999 asked the Voorburg Group to focus on the measurement of these prices. In 2000 the Voorburg Group asked OECD to continue with this study and provide an information exchange role with a webpage. As a contribution to the work of the Voorburg Group, this report presents an update in 2001 of a previous study on prices of services to enterprises carried out by the National Accounts Division of the Statistics Directorate of the OECD. The report is presented in two parts: Part 1 contains the report proper, Part 2 contains the Tables and the explanatory notes. It is offered as a working and evolving document and in that sense is incomplete.
3. The report of the 2000 study was sent out on 26 July to 34 countries, i.e. all OECD member countries and other countries that have attended recent Voorburg Group meetings with a questionnaire requesting:
 - a) a report on recent developments in collection of services producer prices (since July 2000) including:
 - i) new price surveys with details;
 - ii) discontinued price surveys;
 - iii) new publication of PPI data
 - iv) new methodological publications/papers
 - b) the purposes of services PPI collection and the principal users
 - c) a PPI contact name for exchange of information update the entries in tables 2 and 3 of the 1999 report concerning collection of prices classified by activity (ISIC rev 3) and prices classified by product (CPC v 1.0) respectively;
4. Responses were requested by 31 August.
5. At the time of writing, responses to the inquiry have been received from 18 countries, with another three countries regularly sending information on services PPI to OECD as part of OECD data collection on short-term indicators. Two respondents - Austria and the Slovak Republic - feature for the first time in this OECD inquiry report, thus bringing the coverage of OECD knowledge of activity

in this area to 31¹ countries.

6. The cumulative responses to this and the previous inquiries are summarised in tables 1,2 and 3.
7. Table 1 “State of Inquiry - Services Producer Prices” provides a simple summary of cumulative national responses to the OECD inquiry.
8. Table 2 “Summary of Responses to Inquiry on Prices by ISIC Activity” provides summary information by ISIC rev 3 (3 or 4 digit) activity, on which countries collect data, what type of prices are collected, the frequency of collection, the type of service priced, and the start date.
9. Table 3 “Summary of Responses to Inquiry on Prices by CPC Product” sets out, for those countries that have been able to provide it, information on price collection by 3 or 4 digit ISIC activity and product. Products are classified by CPC version 1.0 as far as possible, but some products have not been definitively classified.
10. Other appendix tables provide a list of country codes, notes to table 2 and 3, a list of nominated national contacts, new publications of data and methodology, why and for who data are collected, and in Annex 1 there is a summary of regular OECD services PPI data collection.
11. To provide some historical background, the 1997 questionnaire asked countries to indicate for ISIC Rev.3 service groups or classes, the type of price collected (i.e. whether list, transaction, mark-up price, other), the frequency of pricing, the number of price quotations per period, the type of service priced (simple service, composite service, service bundle, other), the start date of data collection.
12. The 1998 questionnaire introduced the correspondence between those ISIC groups or classes for which prices of services to enterprises are collected (listed in the response to the 1997 questionnaire) and the CPC² version 1.0, at the five or occasionally four digit level. Respondents were requested to indicate for which CPC classes price data are collected, or to describe which service products are observed where they do not fit CPC classes.
13. At the request of the Voorburg Group contact names and this year a special question on why these data are collected and for which users.
14. The emphasis over recent years has evolved from prices of services provided to enterprises to services producer price indices, which is broader in scope. This change accords with the stated aim of the Voorburg Group to contribute services material to a new PPI manual.

RESULTS

Description of summary Tables

15. Table 1 sets out which countries have responded to the OECD inquiry in 2001 and in previous years and attempts to categorise their activity in the domain of collection of prices of services provided to

¹ Hong Kong is a special administrative region of China.

² The correspondence between ISIC and CPC and fuller descriptions of CPC products is given in the *Central Product Classification (Services Part; Sections 5-9) Version 1.0*, at the UN Classifications web pages at <http://esa.un.org/unsd/cr/registry/regcst.asp?Cl=3&Lg=1>.

enterprises. It indicates which collect price data on these services, which use CPI as a proxy for such prices, which have indicated future plans for data collection, and those countries that have provided CPC product details relating to prices collected.

A. Prices of services to enterprises by service activity

16. Table 2, is an updated version of the table in the report, that was first presented to the Voorburg Group in 1998.

- Columns 1 and 2 list, ISIC rev 3 codes and descriptions of activity groups (three digit level) or classes (four digit level).
- Column 3 provides the codes of countries which report collecting prices of services to enterprises for that activity.
- Column 4 gives details of the *type of price collected*. Three types of prices are identified, list prices, transaction prices, mark-up prices and a residual category “other” is provided for those prices which do not correspond to any of the three differentiated types:

-- A *list price* is a price or tariff published by the service provider which can be collected by simply reading the list; list prices are gross of any discounts which some customers may be able to negotiate.

-- A *transaction price* is the price actually charged by the producer after deduction of any discounts.

-- A *mark-up price* is calculated by the statistical office by adding a mark-up, reported by the service provider, to the estimated cost of hours of work. This type of price is used for services consisting mainly of labour inputs.

-- some countries have also identified the type “*model price*”, where a well specified hypothetical job is priced.

- Column 5, *frequency of pricing*, indicates whether prices are collected monthly (M), quarterly (Q) or annually (A);
- Column 6 shows the *number of quotations* per period.
- In column 7, *type of service priced*, three types of services are identified, a simple service, a composite service, a service bundle; a residual category “other” is provided for those services which do not correspond to any of the three differentiated types.

-- A *simple service* is a standard service often measured in physical quantity units such as ton-miles, number of hours.

-- A *composite service* is a service composed of a number of simple services which are necessarily produced together due to existing regulations, security measures or production processes. The customer is not free to choose to purchase only some of the components of a composite service. Either all are purchased together or none are purchased at all.

-- A *service bundle* is composed of a set of services negotiated between the service provider and the customer. The bundle of services provided may differ according to the customer.

- In column 8, *start date*, the actual or planned date for data collection of prices is indicated.
- *Explanatory notes* at the end of the table give additional information on coverage, type of price collected and type of service priced.

B. Services producer prices by service product

17. Table 3 indicates the CPC classes, or other service products which do not match the CPC, for which prices are collected. CPC classes are listed so as to show the correspondence with the ISIC groups given in Table 2.
18. To understand the links between Tables 2 and 3, it should be noted that only those ISIC groups or classes for which price collection by product has been identified, by at least one country, appear in table 3.
19. Table 3 is laid out as follows:
 - Columns 1, 2 and 3 are identical to columns 1, 2 and 3 of Table 2. ISIC Rev.3 codes and headings are given in columns 1 and 2. Codes of countries which collect data on these service activities are given in column 3.
 - Columns 4 and 5 list the codes and headings of the CPC version 1.0 corresponding to the ISIC headings given in columns 1 and 2.
 - Column 6 indicates the acronyms of countries which are able to identify service products for which prices are collected, in terms of the CPC.
 - Column 7 indicates service products for which prices are collected but do not fit the descriptions of CPC classes. The description of services listed in this column repeat the wording used in the responses from countries.
 - Explanatory notes at the end of table 3 provide additional information on coverage and type of price.

Comments on results

A. Prices of services to enterprises by service activity

20. Out of the 31 countries which have responded to OECD since 1997, nineteen respondents report that they collect prices of services to enterprises (Australia, Canada, Czech Republic, Finland, France, Germany, Hong Kong (China), Japan, Korea, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Spain, Sweden, United Kingdom, United States), eleven reported that they do not as yet collect prices of services to enterprises (Belgium, China, Denmark, Hungary, Iceland, Ireland, Italy, Malaysia, Switzerland, Turkey). Finland is collecting services PPI data for the first time in 2001. It is not always clear, where countries collect producer prices (i.e. prices of producers) of services that

might be supplied to consumers or enterprises, whether or not they make a differentiation between the two in the prices collected.

21. Over a third of the countries which report collecting services producer prices, collect prices for the following activities (in ISIC order):
 - Hotels, camping sites and other provision of short-stay accommodation (ISIC 551)- 11 countries
 - Transport via railways (ISIC 601) - 11 countries
 - Freight transport by road (ISIC 6023) - 11 countries
 - storage and warehousing (ISIC 6302) 7 countries
 - Sea and coastal transport (ISIC 611) - 11 countries
 - Scheduled air transport (ISIC 621) - 11 countries
 - National post activities (ISIC 6411) - 9 countries
 - Telecommunications (ISIC 642) - 12 countries
 - Real estate activities with own or leased property (ISIC 701) - 10 countries
 - Real estate activities on a fee or contract basis (ISIC 702) - 8 countries
 - Renting of land transport equipment (ISIC 7111) - 10 countries
 -
 - Software consultancy and supply (ISIC 722) - 9 countries
 - Accounting, book-keeping and auditing activities; tax consultancy (ISIC 7412) - 10 countries
 - Architectural and engineering activities and related technical consultancy (ISIC 7421) - 8 countries
 - Advertising (ISIC 743) - 8 countries
 - Investigation and security activities (ISIC 7492) - 7 countries
 - Building cleaning activities (ISIC 7493) - 9 countries.
22. The frequency of pricing for the activities listed above is either monthly, quarterly and in a few cases annual. The type of price collected is a transaction price or, slightly less frequently, a list price; mark-up prices and other prices are relatively seldom. The type of service most frequently priced is a simple service. Composite services and, to a lesser degree, service bundles are also priced, sometimes in conjunction with a simple service. The number of price quotations varies widely between countries within each ISIC group and from one ISIC group to another. Most countries started collecting data on prices of services to enterprises during the 1990s. Some countries (Japan, Mexico, New Zealand) have some data which go back to the 1970s or 1980s.
23. These results serve as a starting point to define standard practices for data collection on prices of services to enterprises. It would appear that there is a preference for simple services, transaction prices and monthly data.

New Surveys

24. Activity in the collection of services producer prices continues to expand, over and above the fact that more countries are reporting past activity. 29 new surveys have been reported as launched since July 2000 or are to be launched in 2001 by five countries. They are on:
 - Retail (ISIC 52) - US (17 different surveys)
 - Hotels (ISIC 551) - CAN, AUS
 - Storage and warehousing (ISIC 6302) - HKG
 - Telecommunications (ISIC 642) - FIN
 - Real estate activities (ISIC 70) - HKG

- Renting of machinery and equipment (ISIC 712) - HKG
- Computer and related activities (ISIC 72) HKG
- Legal Activities (ISIC 7411) - HKG
- Accounting (ISIC 7412) - CAN, HKG, FIN
- Building cleaning activities (ISIC 7493) - FIN.

Telecommunications was nominated as a future development area by four countries.

B.Prices of services to enterprises by service product

25. Countries were asked to provide information if possible on products priced, using either the CPC or a description where the CPC classification is inadequate. Most countries do not actively use the CPC, and this unfamiliarity consequently makes some reluctant to complete the product section. To date only twelve countries have provided details of products being priced (Australia, Canada, France, Germany, Hong Kong, Japan, New Zealand, Portugal, Poland, Sweden, United Kingdom, United States).
26. The responses are summarised in Table 3. In column 6, *CPC*, the codes of countries are indicated on the line of the CPC class for which prices of services to enterprises are collected. The notes following the table provide additional information on country practices included in the questionnaire responses. In column 7, *Other*, services which do not match the CPC are described in the terms used by respondents. The description of the service is aligned either with the CPC class to which it comes closest or on a separate line when a correspondence with CPC is not possible.
27. A crude count of CPC products and “other service products” priced shows that there are 176 CPC service classes corresponding to the 53 ISIC groups for which product prices are collected and identified. The same as last year. Prices for over 110 “Other service products” are also collected. If these are added to the CPC classes, under the assumption that all “other services” correspond to different products, a total of over 280 service products are priced by the eleven respondent countries altogether. In fact these “other products” are in most cases either combinations of CPCs or part of one or several CPCs. This does not mean, of course, that each of the eleven countries collect data for 280 service products. For countries individually, the number of products priced varies between seven (Poland and Sweden) and over 100 for Japan and New Zealand.
28. Hong Kong, China and Netherlands have this year newly provided details of products priced.
29. The figures above give a rough indication of the extent to which services to enterprises are priced. The following table A gives a better idea of the distribution and extent of price collection by identified product for the ten countries responding on table 3. For fuller details refer to table 3 and the accompanying notes. The actual number of products priced when indicated by CPC is not a precise or strictly comparable indicator of price collection activity and numbers should be treated with appropriate caution. We can see that eight countries are collecting prices by identified product for a broad range of business services (at least four of the ISIC groupings) These are AUS, CAN, HKG, JPN, NZL, SWE, GBR and USA.

Table A Number of reported CPC and distinct “other products” prices collected by country and ISIC activity

ISIC Activity Group	AUS	CAN	FRA	DEU	HKG	JPN	NLD	NZL	PRT	POL	SWE	GBR	USA
45						2							
50						1		1				1	1
55		1						2	7		1	1	1
60-63	20			3	4	27		28		6	1	6	17
64	1	1		5	3	8		4		2	1	5	6
65-67					2	11		3					11
70	3					21		4			1	3	3
71	6		2			10	2	6			3	4	6
72	5	5			2	4		5				3	2
73	1							1					
74	40	6	11		8	30		46				6	15
80								1				1	
90-93						7		1					

C. Other information

30. **Why are data collected and who are the principal users?** Thirteen countries responded to this new question in 2001. Eleven explicitly mention use by National Accounts, other common responses were as a deflator of output, for monitoring of price movements and inflation, as a short-term indicator of economic activity, for business use and as part of a national strategy on improving measures of prices or output. Full responses can be found in the appendix.
31. **Quality adjustments:** Australia, Germany, Japan, Mexico, New Zealand, United Kingdom and United States, have provided explanations on how quality adjustments are dealt with when pricing services to enterprises. These are copied in the Annex to part 1 of this report.
32. **Price indices:** Information provided in past years indicated that price indices used are generally Laspeyres type indices, but that has not been tested this year..
33. **Data Publication:** The amount of published services PPI data has grown significantly since last year as more price series mature and get established.
 - The Bank of Japan publishes a monthly Corporate Service Price Index (CSPI) with 8 major component and 39 sub-group component series, available on the BOJ website.
 - The US publishes established monthly services price indices as part of its PPI publication. Data are available from the Bureau of Labor Statistics website. They include price indexes for retail margins, railroad transportation, motor freight transportation and warehousing, United States postal service, water transport, air transport, pipelines, security dealers, health services and legal services.
 - The UK price series when established are published alongside other goods product PPIs and an experimental top level CSPI, with subcomponent series is published quarterly on the ONS website and in “Economic Trends”.
 - Australian prices data were published in an article in March 1999 as ten experimental series, and ABS now publishes established series in a quarterly press release 6423.0, “Producer Price Indexes for Selected Service Industries”, including two high level indexes for transport services, and

property and business services. Summary information is available from the ABS website - see <http://www.abs.gov.au>.

- New Zealand publish an extensive range of services producer prices on the SNZ website alongside other PPIs and are planning to publish trade in services price indices for 4 broad sectors.
- The Bank of Korea publishes about 20 services PPI components monthly alongside goods PPIs on its website.
- France for the moment publishes four PPIs for building cleaning activities, security activities ISIC 7412 and renting of cars and construction/civil engineering equipment Germany publishes price indices of sea freight rates, postal services and telecommunications. The index of sea freight rates in liner trades is now published broken down by major shipping region.
- Hong Kong, China publishes in Monthly Digest of Statistics, services PPIs for hotels and boarding houses, telecommunications, miscellaneous communication services, air transport, land transport and maritime transport.
- Poland publishes about 20 transport and communications PPIs monthly in "Prices in the National Economy". Canada publishes a traveller accommodation price index
- The Bank of Mexico publishes some data in Spanish only on its website

34. **Documentation:** Some significant documentation, mainly in English, on services prices work is available from a number of countries. Voorburg Group Members and others may wish to be aware of the following:

- New Zealand's "Producers Price Index - Concepts, Sources and Methods and Index Detail".
 - The Bank of Japan has published a methodological paper "Revision of the Corporate Service Price Index (CSPI) to 1995 base" and "Quality Adjustment of Price Indexes" on the Bank of Japan website <http://www.boj.or.jp/en/siryosiryof.htm>
 - From Germany two papers on "Recalculating the Price Indices of Postal, Postal Banking and Telecommunications" I. Beuerlein 1995; and "Revision and rebasing of seafreight indices on base 1995" SB (now in English).
 - Australia's ABS has published "Producer Price Index Developments" an information paper 6422.0 on 25 March 1999 available from the ABS website <http://www.abs.gov.au/>
 - The US Bureau of Labor Statistics has published "Producer price indexes for Engineering Services" Roslyn B. Swick and "Producer price indexes for accounting services, legal services and advertising agency services" Irwin B. Gerduk. Research papers on dataprocessing services and TV broadcasting stations may be available on request to the BLS.
 - The UK Office for National Statistics has provided "Corporate Services Prices: Publication of a Prototype Index" Nick Palmer BP&S Division July 2000
 - The Bank of Korea has provided a methodological paper describing the services part of the Korean PPI as at Q2 2000
 - INSEE, France has published "The French producer price indices and business service price indices" in the collection INSEE METHODES no. 89 October 1999
 - A number of Voorburg Group service producer prices case studies and background papers are available at the Statistics New Zealand and Spain's INE website.
35. OECD is currently collecting producer price data for all sectors as part of its Indicators of Industry and Services (short-term indicators) quarterly data collection. Summary details on those supplying data are provided at Annex 1. Nine countries are currently providing data under this scheme and other countries are encouraged to do the same if they are able to do so. As this collection grows the need for this annual survey of activity from Voorburg Group members will diminish. It is therefore proposed **subject to countries views** to make this the last such survey.

Some Concluding remarks

36. The review of responses to the OECD shows that the coverage of the service sector varies considerably between countries. Some have achieved a fairly wide coverage, whereas others provide a limited coverage or no coverage at all but with plans for further development. The collection of prices in this area continues to expand at a similar pace to last year. 29 new surveys are reported since last July and others identified as planned. However in a significant number of countries prices of services provided to enterprises are not collected and there are no plans for price data collection in the short or medium term.
37. One new country has started to collect services PPI data since July 2000, but a significant number have not yet seen the need. What else might be done to at international level to encourage further take up?
38. Country practices are still very varied and while the proposed PPI Manual should help in harmonising practice are further actions needed to promote a convergence of practices? Do we need to take this work to different groups?
39. We should continue to advance the use of the CPC as a product framework in services output and prices work, while identifying and learning about its deficiencies.
40. Do countries agree that this survey has reached the end of its useful life and IIS should take up the running with the publication of data as soon as they are able.

ANNEX 1

Quality adjustments - Comments by:

Australia

In compiling the price indexes we attempt to identify and adjust for changes in the quality of the services priced. This involves regular contact with respondents.

Where changes in services are detected we seek both qualitative and quantitative data e.g. cost data. In general, the quality adjustment reflects the change in the costs of providing the service.

Germany

Quality adjustments in producer price statistics for services are restricted to cases where a substitution is necessitated because a priced item is no longer offered on the market.

When a replacement of a priced item is necessary, a stipulated procedure for quality adjustment is applied:

1. First there is a search for a new variety, which is of the same quality as the one to be replaced or which has only minimal differences in the relevant quality characteristics. The prices of the old and the new variety are then directly compared, that is, the price change is equal to the difference of the observed prices.
2. If a new variety with relevant quality differences has to be selected, there are two possibilities. Either an expert makes an explicit estimation of the money value of the quality difference and this money value is subtracted (quality improvement) respectively added (quality deterioration) to the observed price of the new variety. Or, if an expert judgment is not available, the new variety is brought into the index showing no price change from the previous month. The implication of the link method is that all of the difference in the price between the two varieties is due to quality difference.

Japan

The sample prices are replaced when they cease to be representative of the selected service, the contract terms are changed, or the surveyed companies are required to change. In such replacements of sample prices, any price difference between the new and old services will be adjusted as below so that only the fundamental price change, which excludes the price change attributed to quality change, will be reflected in the indexes. (a) The new sample price will be linked with the old one without adjustment (direct comparison), as long as the difference in quality between the two services is negligible. (b) The new sample price will be linked so as not to raise or lower the index (treated as no change), if the price difference between the two services is entirely attributed to quality. (c) The new sample price will be linked so as to reflect the price change unrelated to any quality change, if the price difference between the two services differs from that associated with a change in quality. However, if it is difficult to compare the difference in quality between the two services, the price is treated unchanged.

The production/supply cost method, which specifies the price difference corresponding to the quality difference, on the assumption that the cost for the quality change equals the price difference due to its quality difference, is mainly used to specify the part of the price difference corresponding to the quality change out of the total price difference between the two services.

Mexico

The quality adjustments made reflect the change in the cost of the service provided.

Prices are adjusted for quality changes in the following : 551 Hotels; 552 Restaurants, bars and canteens; 642 Telecommunications; 660 Insurance and pension funding; 7111 Renting of land transport equipment; 809 Adult and other education.

New Zealand

Several strategies are used to minimise the effects of changing quality on price movements:

1. The items to price are generally for simple services and are clearly defined so that changes in quality can be more easily identified and quantified.
2. Respondents are contacted to ensure that questionnaires specify commodities that they are able to price.
3. When quality changes are noted by the respondent, or a change in price occurs, the respondents are contacted. In most cases the respondents are happy to provide further information that is useful in deciding how to deal with the quality change.

Process when a quality change occurs, then :

1. Obtain overlapping prices, which allows a price change for the relevant periods to be calculated. Where overlapping prices are not available then a price change is decided based on available information.
2. Either :
 - 2a. In most cases no change in price is recorded and the commodities are treated as being different and the 'new' commodity is spliced in to replace the old one.
 - 2b. If the respondent notes that the change in quality and a change in price has occurred then either a butt or a "splutt" (partial splice/butt) is performed. The price change is estimated.

United Kingdom

Our approach is to seek a detailed specification for each service priced. Contributors are then asked to notify us if any aspect of the specification changes. (An example would be more intensive cleaning services under an office cleaning contract). In addition, when we identify a price change, we check with contributors that there has been no change in specification. Where a change in specification has occurred, we ask contributors to estimate the full costs (including profit) incurred, or saved, by the change. Price relatives are adjusted so that they do not reflect changes in charges that are due to specification changes.

United States

In general, the Producer Price Index is not quality adjusted for changes in technology. The PPI's detailed specification pricing enables quality adjustment for changes in the service provided. When price

determining features of the detailed service specification change, a value of the change is ascertained and a calculation is performed to account for this value in relation to the prices or price change reported. If that value of quality adjustment cannot be obtained or is not appropriate, then overlap prices are requested. The overlap prices are from the same time period for the same service but before and after the service change. The PPI uses net transaction prices, which generally allow the quantity to be held constant. For changes to the input mix of the services priced, the prices are linked showing no price change or linked showing only the amount of price change that is not related to the input mix change, if that can be determined.

Annex 2

Indicators of Industry and Services Data Collection - Producer Price Indices for Services Report on data received

14 August 2001

To date 9 countries have transmitted data on services PPIs to the OECD Secretariat as part of the Indicators of Industry and Services quarterly data collections: USA, JPN, KOR, AUS, NZL, CZE, FIN, NLD and POL.

Sectoral coverage of (IIS requests data on 97 sectors) these PPIs differs significantly in the 9 countries that have transmitted data: Data are available for a single country for 29 sectors, while at the other extreme 6 countries data are available for 5 sectors. No data are available for 22 sectors.

IIS standardises on 1995 as base year. Six countries use the same 1995 base year, but only three of these can provide data from 1995 Japan, Czech Republic and Finland.

In two of the three other countries (USA et Australia), the base is 1998 or later and the data do not commence before 1998. In the third New Zealand the base is Q4 1997 but as the data start in 1994 a rebasing to 1995 is possible.

The frequency of the indices is monthly in seven countries and quarterly in two countries (Australia and New Zealand).

Detailed methodological information has been provided by USA, Korea, New Zealand and the Czech Republic and in a more succinct way with information on classifications by Australia and details of the rebasing from Japan.

The exact definitions of the prices provided for each sector of activity are not always clear. They apparently can include prices to consumers as well as prices to enterprises. They may include taxes (VAT or others). They may include discounts or not.

For example:

- For the USA, they are net selling prices excluding any kind of discount or rebate;
- For Japan they are 'corporate' prices;
- For Korea the prices are for sales for immediate delivery between enterprises including value added tax but excluding other indirect taxes
- For the Czech Republic they are prices of services to enterprises excluding VAT and do not correspond to final consumption ;
- For Finland, they are consumer prices for retail (NACE/ISIC52) and PPI for wholesale (51) they are producer prices.

Appendix B Notes to Tables 2 and 3

Table 2 notes

Services producer prices

Summary of responses to inquiry on prices by ISIC Activity

NOTES

1. GBR List prices used only when discounting not prevalent.
2. GBR External supplier - contract prices for comprehensive fleet maintenance services.
3. NZL Some composite services are priced, such as panel beating and painting.
4. NZL Some service bundles are priced, such as car lease contracts which include maintenance.
5. FIN Cost index for road transport of goods.
6. JPN Information the number of price quotations per period is not available for any ISIC Group or Class because only representative monthly transaction prices of principal companies are surveyed. The total number of price quotations a month is about 3,000.
7. GBR Only hotels and motels with restaurants - business rates.
8. GBR Conference package deals.
9. NZL CPI items used as proxy.
10. FIN Uses CPI components.
11. GBR Only provision of workers canteens and airline meals - charges to businesses.
12. GBR Comprehensive catering services.
13. GBR Business passenger fares (rail fares for Group 601; air fares for Group 621).
14. GBR Freight by rail : contract prices.
15. GBR Transportation plus handling.
16. NZL "Other" refers to the average price for several classes of freight.
17. GBR Contract prices for combined transport and warehousing services.
18. USA Selected additional charges are sometimes bundled with the transport charge.
19. USA See table below
20. AUS Diverse range of activitlogistics service.
21. AUS Service bundle including services such as freight plus warehousing plus stock control.
22. NZL Some composite services such as transport and handling/warehousing are priced.
23. NZL Service bundle refers to delivered bulk gas and petroleum prices.

24. GBR "Other" refers to average prices for commercial vehicle ferries.
25. AUS Covers international sea freight.
26. AUS Covers coastal water transport of freight.
27. GBR Air travel includes meals, etc.
28. USA Security brokers, dealers and investment banking companies
29. AUS Covers domestic air freight.
30. AUS Covers international air freight.
31. NZL Only some service bundles such as package travel are priced.
32. NZL Some composite services such as container hire and handling are priced.
33. USA In/out charges bundled with storage service.
34. AUS Diverse category covering simple management. Warehousing can include handling and distribution.
35. NZL Percent of commission fees converted to dollar value.
36. GBR Only freight forwarding activities.
37. GBR Total charge for arranging transportation of goods.
38. GBR External supplier - national posts parcels.
39. GBR External supplier - total charge for representative baskets of services.
40. USA Local service bills are bundled.
41. AUS 35 respondents with 5 specs each
42. CAN Telephone services to business: telephone services by plan. Average revenue per minute by type of service
43. CAN Television broadcasting of advertisement price index under development. Advertising revenues by station.
44. NZL Bank margin on borrowing/lending converted to dollar value and deflated by CPI.
45. NZL "Other" refers to brokerage based percentage commission rates.
46. USA Expenses and utilities are bundled with leases.
47. AUS Refers to commercial property operators and developers.
48. FIN House price index, dwellings in old index.
49. NLD Long-term leasing only
50. NZL Real estate commission fees in percentage inflated by rental index to derive value.
51. GBR Contract car hire bought from a private company.
52. USA Selected required services bundled with rental services.
53. AUS Simple service corresponds to renting.
54. AUS Composite service corresponds to a fully maintained operating lease.
55. NZL Some composite services such as operator are priced.
56. AUS Fully maintained operating lease. ISIC Classes 7121 to 7129 are collected under the one index under 'Plant Hiring and Leasing'
57. NZL Description for ISIC group 7121 includes prices collected for groups 7122, 7123 and 7129

58. NZL Some composite services such as machinery including operator or m maintenance are priced.
59. GBR Commercially produced index of property values and rental payments is used.
60. CAN Thirty six firms surveyed for one type of service.
61. CAN Advisory, predesign and project management are included in the price index.
62. GBR Only supply of software and contract price for outsourcing of comprehensive IS services.
63. USA Software sold in suites are bundled.
64. GBR On-line access services.
65. GBR Computer processing services.
66. GBR Disaster recovery services.
67. USA Selected bills for various hourly wages are bundled.
68. POL service bundle is applied to freight transport by railway
69. GBR Model package of services as specified by contributor.
70. GBR Including some charge-out (external fee) rates.
71. USA Multiple services transactions are bundled.
72. FRA Price of a "mission" carried out for a client. "Missions" are classified beforehand.
73. GBR Covers only part of the class - consulting engi charge-out (external fee) rate.
74. USA Project input costs are bundled.
75. AUS Service bundle priced for surveying only. Bundles may vary from job to job.
76. USA Selected contracts for multiple advertisements are bundled.
77. GBR Mark-up prices for recruitment and transaction prices for provision of personnel.
78. GBR Some contract prices for composite security services are priced.
79. FRA Real contracts which may include one or several types of security services are priced.
80. NZL Some composite services such as security storage and armoured transportation are priced.
81. GBR Some contract prices for composite cleaning services are priced.
82. USA Selected contracts for multiple services are bundled.
83. AUS Covers pest control.
84. AUS Covers cleaning services.
85. FRA Real contracts including one or several types of cleaning services are priced.
86. GBR Translation services.
87. GBR Direct marketing/secretarial services.
88. NZL Plus CPI items.
89. FIN EC index of purchase prices of inputs in agricultural production.
90. GBR Some composite waste disposal and sewerage services are priced.
91. NZL Some composite services such as bin hire and rubbish disposal are priced.
92. POL Prices expressed in USD are converted to PLN with use of the current USD exchange rate.
93. POL Prices of services for freight transport by road are collected according to the NACE class 60.25 - Freight transport by road.

94. POL	In case of foreign contractors – price depends on the exchange rate of DEM.
95. POL	In passenger transport (foreign lines) – prices are settled taking into account the exchange rate of Swedish Crown; in freight transport – having in mind the current USD exchange rate.
96. POL	In negotiations with foreign partners – prices are settled taking into account exchange rates.
97. POL	Prices expressed in USD (international lines) – based on regulations of IATA. Prices expressed in PLN – taking into account the current USD exchange rate.
98. HKG	lodging services; food & beverage serving services of hotels and boarding houses
99. HKG	land passenger & freight transport services; rental services of vehicles; car park services; vehicular tunnel services
100. HKG	water passenger & freight transport services; freight transport agency services; renting services of vessels; sea cargo forwarding services
101. HKG	ISIC 7413 and 743 combined
102. MEX	ISIC 7121,7122,7129 combined

Table 3 Notes

Services Producer Prices

Summary of responses to inquiry on prices by CPC product

NOTES

1. NZL	Uses the CPI as proxy.
2. AUS	Only a rail freight index is releasable - passenger services (64111) unpublished.
3. AUS	Only a road freight index is releasable.
4. AUS	May be combined with unpublished passenger services in the future.
5. AUS	Only an "other than grain handling storage" index will be released.
6. GBR	UK retail price index for postage used as proxy.
7. CAN	For wired long distance telecommunication services to business only.
8. USA	Not currently published.
9. USA	To begin July 1999.
10. AUS	Only one plant hiring or leasing index is releasable.
11. CAN	One index that covers all CPC activities.
12. AUS	Only a global index is releasable.
13. AUS	Market research only.
14. CAN	Canada produces indices by type of project/client market for all engineering serv noted.
15. AUS	Covers these CPC classes in concept but only one security services index is releasable.
16. AUS	Covers these CPC classes in concept but only one commercial cleaning services index is releasable.

Table 2 note 19 US retail PPI surveys
