Helsinki, Finland
26-30 September 2005

**OECD-Eurostat 2005 INQUIRY ON NATIONAL COLLECTION OF
SERVICES PRODUCER PRICES**

Preliminary REPORT

Seppo Varjonen

OECD Statistics Directorate

21 September 2005

OECD-Eurostat 2005 INQUIRY ON NATIONAL COLLECTION OF SERVICES PRODUCER PRICES

ABSTRACT

As a contribution to the development work of the Voorburg Group on services producer price indices and of the OECD-Eurostat Task Force, this paper reports the outcome of the 2005 OECD-Eurostat inquiry into countries' practices in the field of data collection of these prices. It also may be seen as an update of the accumulated record of previous annual inquiries.

The set of Tables have been slightly changed from the previous surveys. Particularly, more summary tables are shown to provide a better overall picture rather than presenting only detailed responses from countries.

As in earlier years, the questionnaire was sent to all OECD Member countries, EU candidate countries and countries associated with the Voorburg Group. Countries were asked to report on new collections, or plans for collection, of services producer prices since July 2004. A variety of supplementary information was requested by ISIC group of service activity. Countries were invited to indicate the CPC classes of products, within each ISIC group, for which prices are collected. Information was also sought on publication of services prices indices, their use as deflators and availability of methodological reports on work in this area.

Countries were also provided an opportunity to check and update directly the existing inventory tables. Several countries used this opportunity, and some updated the old tables and filled in the questionnaire. Via this procedure, many errors in the inventory were identified and corrected.

Responses from 34 countries show a continued expansion of activity since July 2004 in those countries that undertake this work. The total number of countries that collect data (30 countries) has not significantly increased from the previous year but much progress has been made in improving the coverage of services PPIs, and there are several countries where preparatory work has started or is planned to be started in the near future. There is a large diversity in both service sector coverage and national practices. Most countries only attempt to cover a subset of service activities, with these prices. Of countries that produce services PPIs, about two thirds have an index for **Telecommunications** and **Freight transport by road** and these services are also under active development in rest of countries that have started developing services PPIs. Noteworthy, for telecommunication, services PPI either exists or is under development already in 27 countries. In addition to these two service industries, many other transport and communication activities, particularly **Sea and coastal transport** and **Post and courier activities** (both **National post activities** and **Courier activities**) have been subject of considerable development since July 2004. Developing work continues actively also in number of business services like **Advertising, Legal activities, Accounting, book-keeping etc. activities, Investigation and security activities** and **Building cleaning activities**.

Until recent years, there has been a fairly equal split between monthly and quarterly pricing frequencies but now the share of quarterly indices seems to be increasing. An obvious reason is that the present development work concerns largely industries where production of monthly indices is difficult.

There is also variation amongst types of prices collected and types of services priced though transaction prices of 'simple' services are reported most often.

More and more data are published, and used as deflators in the national accounts, with much useful detail provided by respondents. Nonetheless progress is not straightforward due to the level of development work needed and constant concerns over conceptual correctness and data quality.

Preliminary Report on the OECD-Eurostat 2005 Inquiry on National Collection of Services Producer Prices

INTRODUCTION

1. The inquiry into National Collection of Services Producer Prices became in 2002 year a joint venture between OECD and Eurostat. This has expanded the country coverage and increased the level of interest. It is hoped that this report will inform the discussions of the Voorburg Group and the joint Eurostat-OECD Task Force on Services Producer Prices, as well as provide useful reference material for those statisticians seeking to collect new service producer prices, and others seeking to understand the extent to which countries are improving measures of services output.
2. In order to measure the real output of services, including short-term indicators of output, it is necessary to develop a set of deflators appropriate to particular service products and activities. This need is accentuated by the growing weight of service sector output in GDP that is seen in most economies. Interest in this area is accentuated by analytical needs to understand the impact of the “new economy” on productivity growth and in particular in those service activities where investment in new technology has been high.
3. Mainly in this context there is a considerable effort being undertaken, in a significant number of national statistical agencies, to develop the collection of data on services producer prices. Some agencies have focused exclusively on prices of services provided to enterprises, while others have approached the subject more broadly through the development of services producer price indices.
4. The UN Statistical Commission in 1999 asked the Voorburg Group to focus on the measurement of these prices. The Voorburg Group has been working closely with the Technical Expert Group¹ on Producer Price Indices (TEG-PPI), which is in charge of developing the manual on producer price indices.
5. The Voorburg Group has asked OECD to continue with this study on national development work in the area of services producer prices and provide an information exchange role with a webpage².
6. Inevitably in this fast developing area of statistics OECD, Eurostat and national statisticians have a concern about quality and international comparability of data. What further needs to be done, beyond that which is being taken forward by the Voorburg Group to identify and spread good practice and ensure a reasonable level of comparability of national economic statistics.
7. This report on the results of the 2005 inquiry is an update of an annual inquiry into services producer prices collected by national statistical agencies. The inquiry was carried out by the Prices and Structural Economic Division of the Statistics Directorate of the OECD in consultation with Eurostat. The report giving information on the state of activity of 45 countries has a number of annexed tables and explanatory notes. It is offered as a working and evolving document and as a contribution to the work of those concerned with services producer prices.

¹ The Technical Expert Group, set up by the Intersecretariat Working Group on Prices Statistics (IWGPS), has prepared a Manual on Producer Price Indices. More information can be found at <http://www.imf.org/external/np/sta/tegpqi>

² for more information go to [Price Indices](#)

The 2005 Inquiry

8. The questionnaire together with the existing inventory tables was sent out first time on 9 July 2004 to all OECD and EU Member States, EU candidate countries and several other countries associated with Voorburg Group meetings. On the whole, the questionnaire was sent to 46 countries.
9. It was requested:
 - a) information on whether or not countries collected services producer prices
 - b) if yes a report on recent developments in national collection of services producer prices since July 2004
including:
 - i. new price surveys with details;
 - ii. plans for future price collection
 - iii. discontinued price surveys:
 - iv. details of publication of services PPI data
 - v. methodological publications/papers
 - vi. details of use of services PPIs as deflators by national accountants
 - c) a PPI contact name for exchange of information
 - d) any comments on the entries in tables 2 and 3 of the 2004 report concerning collection of prices classified by activity (ISIC³ rev 3) and prices classified by product (CPC⁴ v 1.0) respectively;
10. Responses were received from 34 countries. The cumulative responses to this and the previous inquiries are summarised in tables 1, 2 and 3.
11. Table 1 “State of Inquiry - Services Producer Prices” provides a simple summary of cumulative national responses to the inquiry.
12. Table 2 “Summary of Responses to Inquiry on Prices by ISIC Activity” provides summary information by activity, on which countries collect data, what type of prices are collected, the frequency of collection, the type of service priced, and the start date.
13. Table 3 “Summary of Responses to Inquiry on Prices by CPC Product” sets out, for those countries that have been able to provide it, information on price collection by 3 or 4 digit ISIC activity and product. Products are classified by CPC version 1.0 as far as possible, but some products have not been definitively classified.
14. Table 4 provides summary information on the number of countries where services PPIs for particular activities (ISIC rev 3) are either available or under development or are planned to be developed in the near future.
15. Table 5 summarises how many industries are covered by services PPIs in various countries and for how many activities new PPIs are currently under development.
16. Table 6 shows the development of new PPIs and revisions of PPIs in countries since July 2004.
17. Table 7 shows industry by industry how services PPIs are divided into monthly, quarterly, 6 monthly and annual indices. The table includes existing PPIs and PPIs that are under development or planned to be developed if information on frequency has been available.

³ International Standard Industry Classification of All Activities Revision 3 (UN)

⁴ Central Product Classification version 1.0 (UN)

18. Table 8 provides new publications of data and methodology, Table 9 why and for who data are collected and Table 10 information on the use of services PPIs as deflators in the national accounts. Country abbreviations and a list of nominated national contacts are shown at the end.
19. To provide some historical background, the 1997 questionnaire asked countries to indicate for ISIC Rev. 3 service groups or classes, the type of price collected (i.e. whether list, transaction, mark-up price, other), the frequency of pricing, the number of price quotations per period, the type of service priced (simple service, composite service, service bundle, other), the start date of data collection.
20. The 1998 questionnaire introduced the correspondence between those ISIC groups or classes for which services PPIs are collected (listed in the response to the 1997 questionnaire) and the CPC⁵ version 1.0, at the five or occasionally four digit level. Respondents were requested to indicate for which CPC classes price data are collected, or to describe which service products are observed where they do not fit CPC classes.
21. At the request of the Voorburg Group contact names were sought and in 2001 a special question was asked on why these data are collected and for which users.
22. The focus over recent years has evolved from prices of services provided to enterprises to services producer price indices (PPIs), which is broader in scope. In fact some countries collect the former and some the latter.

RESULTS

Summary Table 1

23. Table 1 (in the Annex, Tables) sets out which countries have responded to the OECD inquiry in 2005 and in previous years and attempts to categorise their activity in the domain of collection of services producer prices. It indicates which collect price data on these services, which have indicated future plans for data collection, and those countries that have provided CPC product details relating to prices collected.
24. Out of the countries which have responded to OECD since 1997, 30 of them report that they collect services producer prices (Australia, Austria, Belgium, Canada, China, Czech Republic, Denmark, Finland, France, Germany, Hong Kong (China), Ireland, Israel, Italy, Japan, Korea, Lithuania, Mexico, Netherlands, New Zealand, Norway, Poland, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, United Kingdom, United States, Vietnam). In addition, preliminary work has started in several others, particularly European countries on the auspices of Eurostat.
25. Eight countries reported that they do not yet collect services producer prices (Bulgaria, Cyprus, Estonia, Hungary, Latvia, Luxembourg, Malta and Portugal). Out of 30 OECD countries 6 appear to compile no services producer prices indices. These are all in Europe with four in the EU. However, in most of them developing work is planned to be started in the near future or even started but has been put temporarily on hold due to lack of resources.

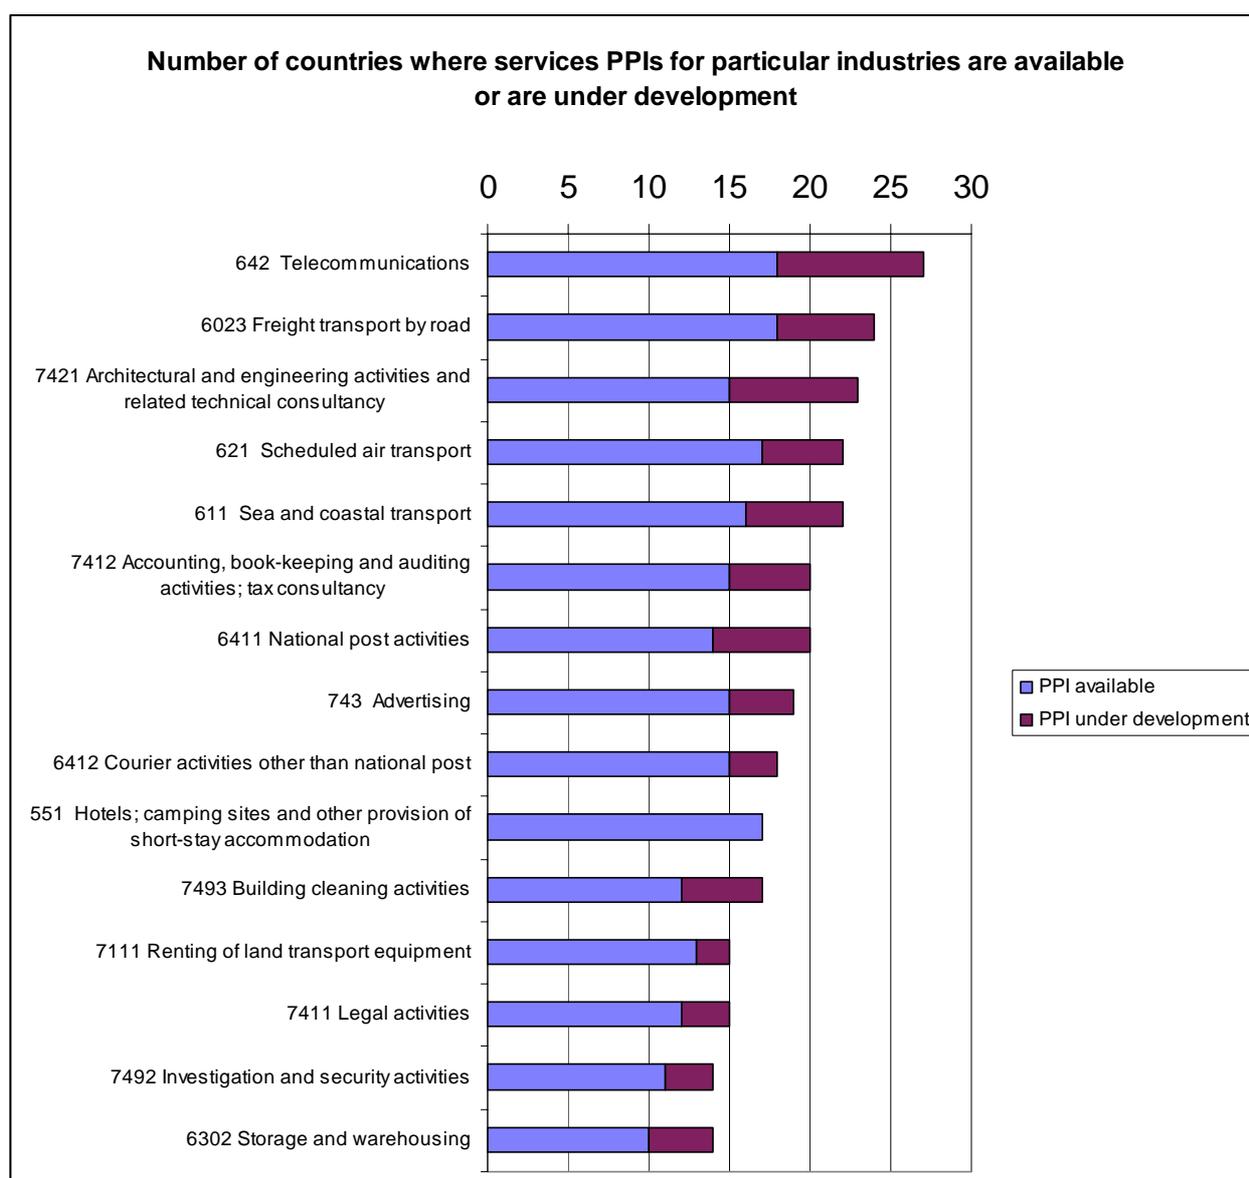

⁵ The correspondence between ISIC and CPC and fuller descriptions of CPC products are available *at the UN Classifications web pages at* <http://unstats.un.org/unsd/cr/registry/default.asp>

Producer price indices by service activity

26. Table 2 provides information by ISIC activity and country on producer price collections. It is an updated version of a table that was first presented to the Voorburg Group in 1998.

- Columns 1 and 2 list, ISIC rev 3 codes and descriptions of activity groups (three digit level) or classes (four digit level).
- Column 3 provides the codes of countries which report collecting services PPIs for that activity.
- Column 4 gives details of the *type of price collected*. Three types of prices are identified, list prices, transaction prices, mark-up prices and a residual category “other” is provided for those prices which do not correspond to any of the three differentiated types:
 - A *list price* is a price or tariff published by the service provider which can be collected by simply reading the list; list prices are gross of any discounts which some customers may be able to negotiate.
 - A *transaction price* is the price actually charged by the producer after deduction of any discounts.
 - A *mark-up price* is calculated by the statistical office by adding a mark-up, reported by the service provider, to the estimated cost of hours of work. This type of price is used for services consisting mainly of labour inputs.
 - some countries have also identified the type “*model price*”, where a well specified hypothetical job is priced.
- Column 5, *frequency of pricing*, indicates whether prices are collected monthly (M), quarterly (Q), six-monthly (6 M) or annually (A);
- Column 6 shows the *number of price quotations* per period.
- Column 7, *type of service priced*, three types of services are identified, a simple service, a composite service, a service bundle; a residual category “other” is provided for those services which do not correspond to any of the three differentiated types.
 - A *simple service* is a standard service. These may, in some cases and where appropriate, be measured in physical quantity units such as ton-miles, number of hours.
 - A *composite service* is a service composed of a number of simple services which are necessarily produced together due to existing regulations, security measures or production processes. The customer is not free to choose to purchase only some of the components of a composite service. Either all are purchased together or none are purchased at all.
 - A *service bundle* is composed of a set of services negotiated between the service provider and the customer. The bundle of services provided may differ according to the customer.
- In column 8, *start date*, the actual or planned date for data collection of prices is indicated.
- In column 9 information is flagged on publication and use of the price index as a deflator in the national accounts.
- Column 10, *Notes*, gives additional information on coverage, type of price collected and type of service priced.

27. The most popular service PPIs are shown in the chart below of which data is based on the summary table 4. In these industries a PPI either exists or is under development at least in 14 of 30 price collecting countries.

28. The frequency of pricing (see Table 7) for the activities is predominantly monthly and quarterly with a few cases of annual or six-monthly. Monthly prices predominate in ISIC sections G, I and O, with quarterly pricing predominating in the other sections except section H where the shares are almost equal. The type of price collected is a transaction price or, slightly less frequently, a list price; mark-up prices, and other prices are less common. Margins are identified as the target price for certain industries such as wholesale and retail, particularly by the US and Australia. The type of service most frequently priced is a simple service. Composite services and, to a lesser degree, service bundles are also priced, sometimes in conjunction with a simple service. The number of price quotations varies widely between countries within each ISIC group and from one ISIC group to another. Most responding countries started collecting data on services PPIs after 1990, but a few countries (Germany, Japan, Mexico, New Zealand, USA) have at least some data which go back longer.

29. It is not always clear, where countries collect producer prices of services that might be supplied to consumers or enterprises, whether or not they make a differentiation between the two types of customer in the prices collected.
30. These results serve only as a starting point to define standard practices for data collection on services PPIs. It would appear that there is a broad preference for measuring simple services, transaction prices and for monthly or quarterly data.

Producer price indices by service product

31. Table 3 indicates the CPC classes of products, or other service products, which may not be matched to the CPC, for which prices are collected. CPC classes are listed so as to show the correspondence with the ISIC groups given in Table 2.
32. To understand the links between Tables 2 and 3, it should be noted that only those ISIC groups or classes for which price collection by product has been identified, by at least one country, appear in Table 3.
33. Table 3 is laid out as follows:
 - Columns 1, 2 and 3 are identical in principle to those in Table 2. ISIC Rev.3 codes and headings are given in columns 1 and 2. Codes of countries which collect data on these service activities are given in column 3.
 - Columns 4 and 5 list the product codes and headings of the CPC version 1.0 corresponding to the ISIC headings given in columns 1 and 2.
 - Column 6 indicates the acronyms of countries which are able to identify service products for which prices are collected, in terms of the CPC.
 - Column 7 indicates service products for which prices are collected but do not fit the descriptions of CPC classes. Services which do not match the CPC are described in the terms used by respondents. The description of the service is aligned either with the CPC class to which it comes closest or on a separate line when a correspondence with CPC is not possible.
 - Column 8 gives additional information on prices.
34. Countries were asked to provide information if possible on products priced, using either the CPC or a description where the CPC classification is inadequate. Most countries do not actively or directly use the CPC, and this unfamiliarity consequently may make a few respondents reluctant to complete the product section. To date 20 countries have provided information on products being priced (Australia, Canada, Finland, France, Germany, Hong Kong, Italy, Japan, Korea, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Slovenia, Spain, Sweden, United Kingdom, United States).
35. A crude count of CPC products and “other service products” priced shows that there are 182 CPC service classes corresponding to the 60 ISIC groups for which product prices are collected and identified. Prices for over 160 “other service products” are also collected. If these are added to the CPC classes, under the assumption that all “other services” correspond to different products, a total of over 300 service products are priced by the twenty respondent countries altogether. In fact these “other products” are in most cases either combinations of CPCs or part of one or several CPCs. This does not mean, of course, that each of the countries collects data for 300 service products. For countries individually, the number of products priced varies between less than five for Spain, Slovak Republic

and Slovenia and over 100 for Japan and New Zealand with Australia and USA pricing almost as many products.

36. The figures above give a rough indication of the extent to which producer prices of services are measured. The following table A gives a better idea of the distribution and extent of price collection by identified product for the 20 countries responding in Table 3. For fuller details refer to Table 3 and the accompanying notes. The actual number of products priced when indicated by CPC is not a precise or strictly comparable indicator of price collection activity and numbers should be treated with appropriate caution. We can see that eleven countries are collecting prices by identified product for a broad range of business services (at least four of the ISIC groupings).

Table A Number of reported CPC and distinct other products priced by country and activity

| ISIC Group | AUS | CAN | ESP | FIN | FRA | DEU | HKG | ITA | JPN | KOR | NLD | NOR | NZL | PRT | POL | SVK | SVN | SWE | GBR | USA |

New indexes

37. Activity in the collection of services producer prices continues to expand. The table below (based on Table 6 of the Annex) shows those industries where new indexes have been reported as launched since July 2004 or are to be launched in 2005 in two or more countries:

Table B Number of countries launching new PPIs for various industries since July 2004

| | | |
|------|----------------------------------------------------------------------------|----|
| 642 | Telecommunications | 11 |
| 6023 | Freight transport by road | 8 |
| 611 | Sea and coastal transport | 7 |
| 6411 | National post activities | 7 |
| 6412 | Courier activities other than national post | 7 |
| 621 | Scheduled air transport | 6 |
| 6301 | Cargo handling | 6 |
| 743 | Advertising | 6 |
| 6302 | Storage and warehousing | 5 |
| 7411 | Legal activities | 5 |
| 7412 | Accounting, book-keeping and auditing activities; tax consultancy | 5 |
| 7492 | Investigation and security activities | 5 |
| 7493 | Building cleaning activities | 5 |
| 7421 | Architectural and engineering activities and related technical consultancy | 4 |
| 6519 | Other monetary intermediation | 3 |
| 701 | Real estate activities with own or leased properties | 3 |
| 72 | Computer & related activities | 3 |
| 724 | Data base activities | 3 |
| 725 | Maintenance and repair of office, accounting and computing machinery | 3 |
| 7414 | Business and management consultancy activities | 3 |
| 7491 | Labour recruitment and provision of personnel | 3 |

| 7111 | Renting of land transport equipment | 2 |
| 7122 | Renting of construction and civil engineering machinery and equipment | 2 |
| 721 | Hardware consultancy | 2 |
| 722 | Software consultancy and supply | 2 |
| 723 | Data processing | 2 |
| 729 | Other computer-related activities | 2 |
| 7413 | Market research and public opinion polling | 2 |

Other information

38. **Current use of services PPIs used as deflators in national accounts.** The question has been included only in the inquiries for 2002-2005. Countries were asked: *“If some services PPIs are used as deflators in your national accounts, can you please provide any details as to how they are used and the extent of the use”*. Answers for all inquiries are combined below.
39. Response have been received from fifteen countries, fourteen of which have at least some services PPIs already used as deflators of output in the national accounts. It appears that well-established series are

nearly always used as deflators. The full responses including some very detailed ones are described in Table 10 of the Annex.

40. **Why are data collected and who are the principal users?** Fifteen countries have responded to this question of which most explicitly mention use by National Accounts. Other common responses were as a deflator of output, for monitoring of price movements and inflation, as a short-term indicator of economic activity, for business use and as part of a national strategy on improving measures of prices or output. Full responses can be found in the Annex (Table 9).
41. **Price indices:** Information provided indicated that price indices used are generally Laspeyres type indices, but that has not been tested after 2001.
42. **Data publication and methodological documents:** Responses from countries can be found in the Annex, (Table 8).

Some Concluding remarks

43. Responses to the 2005 OECD-Eurostat Inquiry on National Collection of Services Producer Price Indices show a continued expansion of activity since July 2004 and in 2005 in those countries that undertake this work. In several new countries PPIs for services are under development.
44. There is a large diversity in both service sector coverage and national practices. Most countries only attempt to cover a subset of service activities, with these prices. Industries that have been subject of considerable development work since July 2004, are particularly **Telecommunication services, various transport activities, Post and courier activities** and number of business services like **Advertising, Legal activities, Accounting, book-keeping etc. activities, Investigation and security activities** and **Building cleaning activities**.
45. Coverage of detailed services products varies among activity groups. In only a few cases are the service products of an activity group well covered and then it is only by small number of countries. There is also variation amongst types of prices collected and types of services priced though transaction prices of 'simple' services are reported most often. There is a fairly equal split between monthly and quarterly pricing frequencies. The share of quarterly pricing seems to be growing due to active developing work in launching PPIs for business services where monthly pricing is often particularly difficult.
46. More and more data are published, and used as deflators in the national accounts, with much useful detail provided by respondents. Nonetheless the progress cannot be very fast due to the level of development work needed and constant concerns over conceptual correctness and data quality.
47. Country practices are still very varied and while the proposed the shared experiences and principal papers on prices of the Voorburg Group, the new PPI Manual and the forthcoming OECD-Eurostat Methodological guide may help in harmonising practice, further actions are likely to be needed in this fast developing area to identify the priority needs for harmonisation and promote a greater degree of convergence towards good practice.

48. The use of the CPC as an internationally accepted product framework in services output and prices work, while inadequate in some respects, should be encouraged and any identified CPC deficiencies addressed in the 2007 revision process.
49. Comments from delegates on the accuracy of the report and possible improvements are invited.

(1) AUT Currently Statistics Austria is collecting price data for Scheduled Passenger Air Transport and Advertising Services. Due to confidentiality reasons and the experimental character of these two indices, no time series are published at the moment.

(2) DNK Denmark is collecting or planning to collect data for services producer prices indices to cover the forthcoming STS-regulation. The collecting started in November 2003 and has been expanded during 2005.

- (3) JPN Services prices are collected for compiling the Corporate Service Price Index (CSPI), which is the price index that aggregates the transaction prices between companies. The CSPI has been revised from the 1995 base to the 2000 base in November 2004.
- (4) LTU A pilot survey on services producer prices has been started in the following activities of NACE: Sea and coastal water transport (61.1), Schedule air transport (62.1), National post activities (64.11), Courier activities other than national post activities (64.12) and Telecommunications (64.2). The respondents have been selected and a questionnaire prepared as well as instructions for filling it in. The representative services were selected jointly with enterprises. Price data are planned to be collected and experimental quarterly price indices calculated in the second half of 2005.
- (5) NZL Statistics New Zealand commenced with a redevelopment program in September 2003. All commodity indexes within all the industries in the suite of Producers Price Indexes will be reviewed and redeveloped. The program is planned to continue until July 2008. After that period a new version of the Australian and New Zealand Standard Industrial Classification (ANZSIC 2006) will be implemented. During the current redevelopment period (2003 to 2008), new commodity indexes will be developed as needed to be used in the new industry structures in the PPI based on the new classification (ANZSIC06)
- (6) SVK Slovak Republic has started to develop PPIs for the following industries:
In 2004: 70, 71, 72, 74 (experimental calculations available)
In 2005: 64, 65, 66 (experimental calculations available)
In 2006: 60, 61, 62 (planned)
- (7) SVN In 2005 Slovenia started to study the following sectors:
- Freight transport by road (ISIC 6023 / NACE 60.24)
- Post and courier services (ISIC 641 / NACE 64.1)
- Telecommunications (ISIC 642 / NACE 64.2). (Collection of list prices has already started).
- Legal activities (ISIC 7411 / NACE 74.11)
- Accounting, bookkeeping and auditing activities (ISIC 7412 / NACE 74.12)
We are currently in process of examining the structure of those sectors, testing different approaches for price collection, reviewing experiences of other countries and making visits to corresponding branch
- (8) BGR Producer Prices in Services is the new indicator that is required in the Regulation 1158/2005 concerning short-term statistics. In 2006 NSI will start compilation of output prices for selected NACE activities that are required in the Regulation. NSI will start compilation of output prices with following NACE activities: 64.11 National post activities; 64.12 Courier activities; 61.1 Sea and coastal water transport; 62.1 Scheduled air transport; 64.2 Telecommunications. The methodology for compilation of the indexes will follow the draft joint OECD/Eurostat Methodological guide for developing producer price indexes for services. The new indicator will have a first reference period of January 2005. The first results will be available at the end of 2007 and regular data transmission to Eurostat will be started.
- (9) BRA Since 1998 Brazilian Institute of Geography and Statistics (IBGE) has been studying services activities through an Annual Survey on Services and we are planning to introduce a Monthly Survey up to 2007. For that we also started studying the alternative to develop a Producer Price Index for Services which will be used as a deflator for its historical number series.
Data on service production in selected activities are collected since 2000: road transport, railroad transport, water transport, air transport, computer services and telecommunication and audio-visual services. In 2004 we implemented a new Appendix for Engineering and Architecture Services and in 2005 we are going to implement an Appendix for Professional Services (legal services, accounting services and other enterprise support services). Product classification used in the survey is developed according to the CPC version 1.0 and will be used to build up PPIs for services.
- (10) CYP It is planned to start the development of the services price index in September 2005. For this purpose we have received a grant from Eurostat within STS.
- (11) EST Statistical Office of Estonia does not collect services producer prices yet. We are studying certain sectors of services (legal and accounting activities).
- (12) LUX A pilot study was carried out in 2003/2004 and a number of industries were selected where price collection will be started. However, the developing work is on hold due to lack of resources and will be restarted in 2006 providing that resources become available.

(13) LVA Work to develop PPIs for Freight transport by road (ISIC 6023), Post and courier activities (641) and Telecommunications (642) started but, due to internal difficulties in CSB, is temporarily stopped. As soon as the difficulties are solved, the work will continue.

(14) MLT The NSO Malta has started this year the work on PPIs by sending out appropriate questionnaires to collect information on the following services:

1) For construction NACE 45, we are investigating road construction from the Malta Transport Authority (exhaustive information on civil engineering, since all roads will be covered including bridge construction) and government estate contracts (from the Department of Housing & Maintenance). Based on information received we will shortly contact private construction companies to obtain a more comprehensive view of construction as a whole.

2) For NACE 60, 61 & 62 (land, water and sea transport) we are starting to work on these service prices, and also on NACE 64 (we have made good progress on mobile telephone services and working on courier services, and fixed telephone services).

The above 2 points are already covered by way of a Eurostat grant. It is intended to cover in future (by 2007) the following NACE categories for service prices, NACE 55, 72 and 74, and port services and travel agents within NACE 63). It is planned to start the development of the services price index in September 2005. For this purpose we have received a grant from Eurostat within STS.

Table 2
Services Producer Prices
Summary of responses to inquiry on prices by ISIC activity

| ISIC Revision 3 | | Country | Type of price collected | Frequency of pricing | Number of price quotations per period | Type of service priced | Start date | Published (p), Used as deflator (d) | Notes |
|-----------------|-------------------------------------------------------------------------|---------|---------------------------------------|----------------------|---------------------------------------|-----------------------------------------------------|------------|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Code 1 | Group / Class 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| 451 | Site preparation | NZL | Charge-out rate, transaction price | Q | 73 | Simple service | Sep 1994 | | Most of the indexes are available from an earlier date (as far back as 1977) based on a different classification. |
| | | JPN | Transaction, Mark-up or Wage per unit | M | | Simple service | Jan 1985 | | |
| | | POL | Transaction | M | 30 | | Jan 1990 | d | Price for construction and assembly work |
| 452 | Building of complete constructions or parts, thereof; civil engineering | NZL | Model buildings | Q | | Composite service or service bundle | Sep 1991 | | Most of the indexes are available from an earlier date (as far back as 1977) based on a different classification. |
| | | JPN | Transaction, Time-based | M | | | Jan 1990 | p | |
| | | KOR | Model | M | 17 | | Jan 2000 | pd | Price collection discontinued for residential & non-residential buildings, road, subway, sewage, water supply, electric facility etc. |
| | | POL | Transaction | M | 1,600 | | Jan 1990 | d | |
| | | AUS | Transaction | Q | 500 | | Dec 1999 | p | |
| 453 | Building installation | NZL | Model, charge-out rate and list price | Q | | Simple service | Sep 1991 | | Most of the indexes are available from an earlier date (as far back as 1977) based on a different classification. |
| | | POL | Transaction | M | 700 | | Jan. 1990 | d | |
| 454 | Building completion | POL | Transaction | M | 40 | | Jan. 1990 | d | |
| 455 | Renting of construction or demolition equipment with operator | POL | | M | | | | d | |
| 501 | Sale of motor vehicles | NZL | List price of commodity | Q | | Simple price | Sep 1994 | | Most of the indexes are available from an earlier date (as far back as 1977) based on a different classification. |
| | | USA | Margin | M | | | Jan 2002 | | Recreational vehicle dealers 501 pt and 503 pt |
| 502 | Maintenance and repair of motor vehicles | NZL | List price of commodity | Q | | Simple price | Sep 1994 | | Most of the indexes are available from an earlier date (as far back as 1977) based on a different classification. |
| | | | Transaction | Q | 124 | Simple service, composite service or service bundle | 1977 | | Examples on composite services are panel beating and painting, and on bundled services car lease contracts that include maintenance |
| | | MEX | List | M | 162 | Service bundle | Jan 1994 | | Maintenance services |
| | | GBR | List/contractual | Q | n/a | Simple service or service bundle | Q1 1995 | pd | List prices used only when discounting not prevalent; contract prices for comprehensive fleet maintenance services; external supplier |
| | | FIN | Transaction | Q | several | Simple service | 1990 | | Cost index for road transport of goods. |
| | | JPN | Transaction | M | | | Jan 1990 | p | |
| 503 | Sale of motor vehicles parts and accessories | NZL | List price of commodity | Q | | Simple price | Sep 1994 | | Most of the indexes are available from an earlier date (as far back as 1977) based on a different classification. |
| | | USA | Margin | M | | | Jan 2002 | p | 1 auto and home supply stores; 2 recreational vehicle dealers part |
| 504 | Sale, maintenance and repair of motor cycles, parts and accessories | | | | | | | | |
| 505 | Retail sale of automotive fuel | USA | Margin | M | | | Jul 2001 | p | |

| Total | | 479 | 49 | 112 | 47 |

*) Development of new PPIs by the industry classification used. Revisions or developments of PPIs at a more detailed level of ISIC are recorded as Produced PPIs.

**) The list is not exhaustive because information on plans were sometimes provided at a more aggregated level of ISIC.

Table 5 Number of services PPIs available or under development in countries

| USA | 42 | - |
| VTN | 1 | 6 |

*) PPIs are not necessarily published. Moreover, also PPIs extracted from CPI are included and, therefore, data for countries are not fully comparable. The share of PPIs extracted from CPI is particularly high for **DEU** and **FIN**. Also **HKG** and **NZL** have informed that some indices are based on CPI.

) Includes only developments of **new PPIs by the activity classification used in the inventory. Developments within existing PPIs (by that activity classification) are recorded under Produced PPIs. For this reason, e.g. ongoing work in USA to develop PPIs for sub-industries of Retail trade is not recorded as Under development.

Table 8 New publications and methodological documents**New data publications**

| | |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUS | ABS publication: Producer Price Indexes, Australia (ABS Catalogue no: 6427.0). More detailed information is available via our website: www.abs.gov.au under Publications, Producer Price Indexes Australia cat. no. 6427.0 and Time Series Spreadsheets 6427.0 Tables 22-25 and 45-46 |
| CAN | Meta-data on each of the published surveys can be found in the Statistics Canada website: www.statcan.ca and enter the Definitions, Data Sources and Methods site |
| CHE | The Results are integrated in the monthly publication of the Swiss Federal Statistical Office: "Indice des prix à la production et à l'importation" |
| CZE | The publication 'Price indices of market services in business sphere' (in Czech language) is released monthly on 25th day after the month to which data relate. The publication contains information on trends in price indices of market business services, graphs and comments. Indices calculated in a derived way from the constant base December 1999 are also shown. That concerns indices with price base – previous month = 100, corresponding period of the last year = 100, 2000 average =100, ratio of two rolling averages of the December 1999 index. On quarterly basis, selected average prices of services for CZ-CPA 70, 71, 72 and 74 are usually published. It is possible to obtain this publication mentioned via both the Information Services Department in printed and electronic form and the CSO web site - www.czso.cz in electronic form. |
| FIN | Indices are published quarterly on the Statistics Finland website: http://tilastokeskus.fi/til/pti/index.html Publication started on 18.10.2004 with 13 industries, base year for all is 2003=2000 |
| FRA | Car rental services (short-term rental only), rental of construction and civil engineering equipment, engineering services, security services, cleaning services and accounting services in Bulletin mensuel de la statistique (INSEE). Also on http://indicespro.insee.fr . Indexes for advertising and computer services will probably be published before the end of 2003. |
| DEU | Pilotuntersuchungen zum Aufbau von Erzeugerpreisindizes für die Rechtsberatung, Steuerberatung und Wirtschaftsprüfung in Wirtschaft und Statistik des Statistischen Bundesamtes (May 2005), page 419. Final report about the development of producer price indices for legal activity, tax consultancy, auditing activity services (Eurostat project No 2002 44401 009 (December 2004). |
| ESP | Monthly hotel price index. Published by region, type of tariff and by type of hotel. The sample size is about 6.000 establishments in winter and 8.500 in summer. |
| HKG | 15 quarterly PPI series with base year 2001=100 are released in the Hong Kong Monthly Digest of Statistics published by the Census and Statistics Department (C&SD). They are also posted in the C&SD website, with longer series available in spreadsheet. |
| JPN | For the monthly index release, we publish preliminary figures at the Monthly Report on the 18th working day of the following month. Final figures are released two month after the surveyed month of the index, based on revisions to the preliminary figures, while the preliminary figure of the following month is published. At the same time, we revise the long-term time-series data, which cover all index series of the CSPI. Further, we provide the Explanation of the CSPI, and Notices. All publications are available at the statistics section for prices of the Bank of Japan website http://www.boj.or.jp/en/stat/stat_f.htm |
| KOR | The indices are put in 'Montly prices', published by The Bank of Korea |
| MEX | Not new but data can be found on at www.banxico.org.mx in Spanish (not yet in English) |
| NOR | Architectural, civil engineering and hotel prices on www.ssb.no |
| NZL | Quarterly Producers Price Index release: Hot Off The Press on the Statistics New Zealand website at http://www.stats.govt.nz/ |
| POL | Services producer price indices for the "Transport, storage and communication" section are published in the following the CSO publications: - "Statistical Yearbook of the Republic of Poland" - annually - "Statistical Bulletin" - monthly - "Prices in the National Economy" - monthly - "Prices in the National Economy in 2004" - annually |
| SWE | Indices are published quarterly on the SCB website: http://www.scb.se/pr0801-en |
| CHE | Service prices are integrated into the monthly publication of the Swiss Federal Statistical Office: "Indice des prix à la production et à l'importation". |
| GBR | The service PPIs are published quarterly in the CSPI results section of http://www.statistics.gov.uk/cspi |
| USA | New prices series are published on BLS website |

Recent methodological documents

- AUS** Producer Price Indexes has not released any methodological publications since July 03, however the ABS presented a mini paper for the 18th Voorburg group meeting.
Links to the Voorburg group website:
<http://www.stat.go.jp/english/info/meetings/voorburg/session.htm>
The following paper was presented by the ABS at the 19th Voorburg group meeting:
Producer Price index for Labour Recruitment in Australia, Matthew Berger, Australian Bureau of Statistics
We also expect to release an updated **Concepts Sources and Methods manual for PPI** later this year.
- AUT** Two mini presentations, concerning post and courier services and scheduled passenger air transport, were contributed to the 18th meeting of the Voorburg Group on Service Statistics in Tokyo. Papers are available at: <http://www4.statcan.ca/english/voorburg/>
- CAN** "A Producer Price Index for Accounting Services" presented to VG2000
- CHE** Bureaux d'ingénieurs et d'architectes (NACE 74.2): Office fédéral de la statistique (Suisse), L'indice Suisse des prix de la construction, Octobre 1998 = 100. Bases, Neuchâtel 2004, annexe 7
Federal Statistics Office: "Produzentenpreisindex für den Güterverkehr, April 2001=100", Neuchâtel 2002. Available also in French.
- FIN** Producer Price Index for Services: Report on Investigation and Security Services (Presented at 19th Voorburg Group meeting)
Guidelines for the development of a PPI for Technical Testing and Analysis (Section 4.16 in the OECD/Eurostat Methodological guide for developing PPIs for services)
- FRA** Papers for the Voorburg Group meetings and for the PPI guide (under preparation by the OECD-Eurostat Task Force)
- DEU** Papers for the PPI guide (under preparation by the OECD-Eurostat Task Force)
- JPN** We published following papers for explaining the 2000 base CSPI. All papers are available at the statistics section for prices of the Bank of Japan
http://www.boj.or.jp/en/stat/stat_f.htm
(1) Revision of the Corporate Service Price Index (CSPI) to the 2000 base, published in November 2004.
(2) Explanation of the 2000 Base Corporate Service Price Index (CSPI), published in March 2005.
- KOR** The Bank of Korea published "Price Statistics Overview" at the end of 2003.
- LUX** Pilot project for the establishment of short-term statistics on service prices. Final report. Service Central de la Statistique et des Etudes Economiques (STATEC). Luxembourg, June 2004.
- NLD** THE DUTCH STRATEGY FOR REALIZING PPI'S AND VOLUME MEASURES FOR THE SERVICE SECTOR. Aurél Kenessey de Kenese, Statistics Netherlands Division Macroeconomic Statistics and Dissemination. February 2004
- NZL** A comprehensive methodological document for all Business Price Indices (including services) is currently being written, with an expected completion of August 2005. The purposes of this paper are two-fold. First, it documents the principles and procedures employed by Statistics New Zealand in the production of the Business Price Indices (BPIs). The BPIs include: the Producer Price Index (PPI), which measures price changes relating to the production sector of the economy; the Capital Goods Price Index (CGPI), which measures changes in the cost of capital assets purchased by producers of goods and services throughout the economy; and the Farm Expenses Price Index (FEPI), which measures price changes of fixed inputs of goods and services to the farming industry. Secondly, this paper identifies similar procedures currently used in other countries so that Statistics NZ practices may be considered in light of the best international practices.
- NOR** Enge, Andras Kruger: Prisindeks for tenesteytande naeringar, Rapportar 2001/10 SSB (in Norwegian only)
- POL** A change in methodology since July 2001 regarding the introduction of weights for base year 2000 is documented concisely in "Prices in the National Economy"
- SVK** Supplied to OECD an overview of deflators used by Slovak Republic entitled "Estimation Methods at Constant Prices"
- ESP** "ÍNDICES DE PRECIOS DESDE LA PERSPECTIVA DE LA OFERTA" a methodological note on the hotel price index was provided to OECD in
- SWE** Report 1: Service Price Index for Car Rentals, SE-SIC 92 group 71.100, Norrman V. & Picone G. (2001)
Report 2: Service Price Index for Computer Services, SE_SIC 92 group 72, Cerda M. & Glanzelius M. (2001)
Report 3: Service Price Index for Architectural and other Engineering Services, SE-SIC 92 group 74.20, Bylin M. & Ribe M. (2002)
Report 4: Service Price Index for Accounting and Auditing Services, SE-SIC 92 group 74.12, Gerestränd E. & Leonardsson M. (2003)
Report 5: Service Price Index for Legal Services, SE-SIC 92 group 74.11, Cerda M. (2003)
Report 6: Service Price Index for Water Transport, SNI 2002 division 61, Jansson P. (2004)
Report 7: Service Price Index for Freight Transport by Road, SNI 2002 group 60.24, Jansson P. & Martinsson M. (2003)
Report 8: Service Price Index for Other Transport Agencies, SNI 2002 group 63.4, Jansson P. & Martinsson M. (2003)
Report 9: Service Price Index for Advertising Services, SNI 2002 group 74.4, Cerda M. (2004)
Report 10: Service Price Index for Post and Courier Services, SNI 2002 group 64.1, Martinsson M. (2004)
Report 11: Service Price Index for Other Financial Intermediation, SNI 2002 group 65.2, Gerestränd E. (2004)
Report 12: Service Price Index for Scheduled Air Transport, SNI 2002 group 62.1, Tareke M. (2004)
All reports are published in both Swedish and English at the SCB website: <http://www.scb.se/pr0801-en>
- GBR** The following ONS methodological articles are accessible through the CSPI web page <http://www.statistics.gov.uk/cspi>.
- a paper on the recent rebasing of the CSPI from a base year of 1995 to a base year of 2000.
- a paper on the pricing methodology of the new baking CSPI
- a paper on the redeveloped CSPI for business telecommunications
- USA** **Documentation provided to OECD:**
In 2002: Methodological synopses on US SIC 4833, 7372, 5531, 5541, 5551 and 5561 - Data Processing Services; Television Broadcasting Stations; Gasoline Service Stations; Boat Dealers; Recreational Vehicle Dealers
In 2003: Methodological synopsis on US SIC 6282 and 6411 - Investment Advice; Insurance Agencies; Brokerages
Other methodological documents: Investment advice industry; Liquor store hedonic model; Prepackaged software and data processing
In 2004: Methodological synopses on Building Materials, Hardware, and Garden Supply Dealers; General Merchandise Stores; Apparel and Accessory Stores; Radio, Television, and Consumer Electronics Stores; Furniture and Floor Covering Stores; Household Appliance Stores; Mobile Home Dealers; Accident, Health, and Medical Insurance Carriers
In 2005: Methodological synopses on State and Federal Commercial Banking; State and Federal Savings Institutions; Fitness and Recreational Sports Centers; Merchant Wholesalers, Durable Goods; Merchant Wholesalers, Nondurable goods; Wholesale Trade Agents and Brokers; Construction Equipment Rental and Leasing; On Line Information Services (Internet Service Providers) and Web Search Portal Services; Security Guards and Patrol Services
Other methodological documents:
Measuring Services in the Producer Price Index (the paper outlines continued expansion of coverage for the U.S. Producer Price Index Program by introducing the new economy wide index model).

Two other methodological papers presented at the Voorburg Group meeting in 2004:
The U.S. Producer Price Index for Scheduled Air Passenger Transportation
<http://stds.statcan.ca/english/voorburg/2004%20ottawa/papers/ppi-schairpass-transp.pdf>
and
Appendix: The Effect of the New Quality Adjustment Methodology for Nursing Home Price Indexes
<http://stds.statcan.ca/english/voorburg/2004%20ottawa/papers/qualadj-nursinghome-appendix-us.pdf>

Table 9 What are the main purposes for your collection of services PPI data and who are the principal users?

| | |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUS | National Accounts, Industry Associations, to complete economy wide Stage of Production Price Index |
| CAN | Principally for System of National Accounts Branch of Statistics Canada They use indexes for deflation purposes |
| DEU | Short term economic indicator, it serves as deflator for the national accounts, auxiliary data for consumer price indices Users are economic policy, associations and national accounts |
| FIN | Main users: National Accounts and trade unions |
| FRA | For French public statistical system: price deflated, national accounts, short-term information on economic activity For firms: information on markets relative to their business |
| HKG | To improve the quality of national accounts with wider range of deflators of output series An economic indicator for monitoring price movements of local output and evaluating price competitiveness vis à vis similar products in other territories Users: National Income Branch CSD, HKG China, economists & policy makers in Government and business, academics etc. |
| JPN | The main purpose of compiling the CSPI is to investigate price movements that sensitively reflect the supply and demand conditions of individual services, with a view to facilitating the analysis of macro- and micro-economic conditions. The indexes of less aggregated levels also have a role as a "deflator" that transforms nominal output values into real quantities. Economists, market analysts can use the index to capture the economic situation of Japan from the viewpoint of prices. Of course, the Bank of Japan uses the index for judging the economic situation of Japan and for conducting monetary policy. While the Cabinet Office, in the case of Japan, uses the index as a "deflator" for compiling the SNA. |
| MEX | To complete the national accounts structure, with prices for specific services not found in CPI Users are in both the public and private sector |
| NLD | For National Accounts within Statistics Netherlands For other economic agencies, for industry associations and firms |
| NZL | To provide deflators for the New Zealand national accounts To provide a measure of price change for businesses |
| POL | Deflators for national accounts in the part concerning industrial production; auxiliary data for compiling CPIs; information on development of services prices for such users as banks, research institutes, etc. |
| SWE | For national accounts, the services PPI aim to provide robust deflators for the calculation of GDP |
| CHE | As an economic indicator (measure of inflation and a short-term indicator) As a deflator of output For analysis (macroeconomic, comparative analysis of industries and products) Practical uses (for indexation of prices in budgets, contracts, and pricing of tenders etc) |
| GBR | An indicator of inflation in services sector For national accounts, a deflator of service sector output in GDP and for the index of services output An information tool for business |
| USA | Input for calculation of real GDP and productivity The BEA uses appropriate PPI series to double deflate nominal revenues to determine - real output on a gross product originating basis. The BLS Office of Productivity and Technology uses PPI data to help calculate industry productivity measures These derived economic measures are of critical importance for economic analysis and policy setting. The expansion of the PPI into services has already permitted significant improvements in the measurement of real output - and productivity for service industries with significant time series. |

Table 10 Use as Deflators

| | |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| AUS | <p>The National Account uses these indexes for quarterly processing especially for the Trading and Production team. The Production team in the National Accounts has utilised the PPI price to derive deflators for turnover. A Fame process was created to compile deflators for Manufacturer's Turnover and Other Turnover series sourced from the quarterly business indicators (QBIS). For the most part, QBIS is sampled at the 2 digit level which is mainly the level we revalue, but Road Transport and Wholesale are sampled at a more detailed level. The Trade assembly makes extensive use of EPIs, IPIs, indicator series, PPI services. PPI service indexes are used to derive correct volume estimates especially for the Services export.</p> <p>Some of these indexes are also used to create deflators for the Annual supply use table because the input-output generally require indexes at the 4 digit level.</p> <p>On the use PPIs as deflators in National Accounts. see Table 2.</p> <p>For Accommodation, National Accounts are still using no. guest nights as a volume indicator. However the Accommodation PPI has been recently developed ready for use by National Accounts.</p> |
| CHE | <p>Following PPI for services are used in Swiss NA:</p> <ul style="list-style-type: none"> - Freight transport (rail and road) - Architectural, engineering and other technical activities |
| CHN | Price index for real estate services is used as deflator for value added of real estate services. |
| CZE | When the year GDP is produced in our national accounts, the indices of market business services (4 digit groups in CZ – CPA) are usually used as deflators. The electronic data are sent to the National accounts department each year (quarterly). |
| DEU | <ul style="list-style-type: none"> - freight transport by road: calculation of freight rates per km (separately for long distance traffic and local traffic) for ten categories of goods according to information provided by the federal office for the freight transport - freight transport on inland water: same methodology as for freight transport by road. - Freight transport by railway: Information from Deutsche Bahn AG for turnover and transport of goods in ton kilometer for various categories of goods. <p>(More detailed information available in German language)</p> |
| FIN | All producer price indices that are publishes are being used as deflators in National Accounts (annual/quarterly GDP) |
| FRA | PPIs are used as deflators(annual national accounts) for : renting of construction and civil machinery equipment (code ISIC 7122), renting of land transport equipment (7111), accounting (7412), security activities (7492), building cleaning activities (7493), engineering activities (7421) and computer services (activities in 72). |
| GBR | <p>There are twenty ONS CSPIs used as deflators. They are used to deflate value to volume for UK National accounts. The CSPI are used to deflate 8.6% of the UK GDP (as measured by GVA weighting). The CSPIs which are used a ONS deflators are:</p> <ul style="list-style-type: none"> Maintenance and repair of motor vehicles Hotels Canteens and catering Bus and coach hire Road haulage Freight forwarding Courier services Business telecommunications Construction plant hire Market research Technical testing Employment agencies Security services Contract cleaning Commercial film processing Contract packaging Secretarial services Translation services Waste disposal Sea and Coastal Water Freight |
| HKG | PPI series are used as deflators for discounting the effect of price change so as to derive the constant price value added of relevant economic activities. They are also used for deflating export of services of relevant economic activities to derive constant price estimates of export of services. |
| JPN | Service price indexes of the CSPI compiled by the Bank of Japan are used as deflators in Japan's national accounts compiled by the Cabinet Office. The Cabinet Office matches service price indexes of the CSPI with appropriate components of the national accounts as deflators. |
| NLD | They are widely used in an automated simultaneous balancing procedure of current and constant price estimates in the supply and use table. |
| NOR | List of deflators provided to OECD more information from svein.lasse.rogeborg@ssb.no |
| NZL | Most of the service indexes are used in the deflation of the National Accounts. |
| POL | <p>Services producer price indices in "Transport, storage and communication" for the section in total and divisions, and in "Construction" - in total and for the groups are used in national accounts:</p> <p>Quarterly on the basis of:</p> <ul style="list-style-type: none"> - year 2000 = 100 - previous quarter = 100, - corresponding quarter of previous year = 100 <p>Annually on the basis of:</p> <ul style="list-style-type: none"> - previous quarter = 100 |
| SWE | All producer price indices are being used as deflators in National Accounts (annual/quarterly GDP) |
| USA | <p>For use of deflators see http://www.bea.doc.gov/bea/ARTICLES/2004/11November/1104NIPAMeth.pdf</p> <p>At present published coverage of the services sector is 76.3 percent, versus just 3.6 percent in 1990. Service sector coverage is projected to increase to over 77 percent by 2006.</p> <p>The Producer Price Index is a principal input for the calculation of real GDP. The Bureau of Economic Analysis uses appropriate PPI series to double deflate nominal revenues to determine real output on a gross product originating basis. The Survey of Current Business article specified in the web address provided above was updated in November of 2004 and Table 2 (beginning on page 28) specifically lists the areas of Real GDP where the PPIs for services are used as deflators.</p> |
