I. - Definition of service being collected

According to the North American Industry Classification System (NAICS 2007), Travel agencies, comprise establishments primarily engaged in providing consulting services, planning and organization of travel itineraries. Travel agencies offer various services of advice and trip planning, sell package tours, airplane, bus and other transportation tickets. These services are usually offered by a charge, and act as intermediaries between service providers and users.

A travel agency is a private company that makes travel, such as airlines, hotels, cruise ships, among others, offering better conditions in different travel services intermediary between clients and providers in the field. Travel agency sells its customer products and services related to the trip to held at a lower price and within the framework of really tempting and attractive conditions than what you could get if they are declining to buy it directly in the mentioned suppliers.

On the other hand, travel agencies play an important role in the economic and cultural aspect for example, promoting the exchange of visitors in the world by increasing the flow of foreign exchange.
II. - Unit of measure to be collected

The *Revenues from the provision of services* is the main concept for measuring economic evolution. In censuses and surveys is captured a variety of variables related to incomes, in short-term statistics (monthly basis), for example, the following items:

- Days worked
- Personnel directly employed by the firm
- Personnel not directly employed by the firm
- Remunerations
- Expenditures on goods and services consumption
- Expenditures not derived from the activity
- Revenues for services rendered and goods sold
- Revenues not derived from the activity

While for structural statistics (annual basis), there are higher levels of disaggregation:

- Personnel directly employed by the firm
- Personnel not directly employed by the firm
- Remunerations
- Expenditures on goods and services consumption
- Expenditures not derived from the activity
- Revenues for services rendered and goods sold
- Revenues not derived from the activity
- Fixed assets
- Identification of suppliers and customers

And for Economic Census (every five years), among others variables, collect:

- Participation of foreign capital
- Organization forms
- Occupied personnel
- Remuneration
- Expenditures on goods and services consumption
- Expenditures not derived from the activity
- Revenues for services rendered and goods sold
- Revenues not derived from the activity
- The production value
- Stocks
- Fixed assets
- Units and transport equipment
- Innovation and research
Revenues for the provision of services are defined as:

**Revenues**

It includes the monetary revenue obtained by this establishment during the month of reference as a result of the lending of the service and complementary activities, as well as by concept outside to its activities.
Operating revenues

It is the amount of the revenue obtained by all the services rendered and complementary activities realized by this establishment in the month of reference. The asked for concepts are:

- Revenues by the rendering of services.

- Net sales of merchandise acquired for its resale. It is the amount of the sales of merchandise realized by this establishment. To this value it must reduce to it the amount of the discounts, reductions and returns on these sales plus the expenses realized by delivery service, if there were them.

- Revenues by other concepts derived from its activities like commissions on sales; sales of rejection materials; the amount of the repair and maintenance services lent to third parties; for the services of rent of personal property and real states; by the storage; and by use of patents, marks and franchises, etcetera.

Non operating revenues

It is the amount of the revenues received by this establishment, during the month of reference, by concept outside to its activities.

III. – Market conditions and constraints

Travel agencies market is varied and therefore we can find three types of travel agencies: operators (the trips organized by contracting directly with the operators of the services), wholesalers (they offered and distributed tourist products through agencies retailers, usually they are not hired by the final consumer and tend to make reserves to meet the demands of retailers) and retailers (which directly sell their services to the final consumer).

Although the internet has significantly reduced growth, taking into account that many airlines began to sell tickets directly to customers and therefore was no longer needed the payment of commissions to travel agencies to carry out this work, significantly reducing your income, travel agencies clashed this phenomenon creating their own web sites on the internet to publish and provide information about their travel services.

According to the results of last 2009 Economic Census, in Mexico there are 4,298 travel agencies (establishments), representing about 73% of the Travel agencies and reservation services. Employing about 40,215 people and generating annual revenues of 18,922,188 (thousand pesos). In average each establishment employs 7 people.

In addition to the structural statistics of Economic Censuses and Annual Surveys, the economic evolution of Travel agencies in the short term, is measured by the Monthly Service Survey, then its main results.

IV. – Standard classification structure and product details/levels

The North American Industry Classification System (2007, NAICS - Mexico), aims to provide a unique, consistent and updated framework for the collection, analysis and report of economic statistics, which reflects the structure of the Mexican economy. NAICS Mexico is the basis for the generation, presentation and dissemination of all economic statistics.

NAICS structure

Sector 56, Business support services, waste management and remediation services

5615, Travel agencies and reservation services

- 56151, Travel agencies
  - 561510, Travel agencies
- 56152, Excursion and tour arrangement for travel agencies
  - 561520, Excursion and tour arrangement for travel agencies
- 56159, Other reservation services
  - 561590, Other reservation services

Product details/levels

In services surveys (monthly and annual) are not even collected data at the level of product, however, the lists generated from the North American Product Classification System (NAPCS) to include a module that allows to collect data of products, mainly income and volume are being evaluated. On the other hand, 2014 Economic Census 2014 will provide detailed information on products, and these data will allow design of recruitment instruments best suited for product collection.

V. – Evaluation of standard vs. definitions and market conditions

The definitions of variables into the questionnaires of the Economic Census and Economic Surveys correspond with the concepts and definitions of the National Accounts System (NAS), as well as with the accounting concepts that the enterprises are reporting.

---

VI. – National Accounts concepts and measurement issues related to GDP measurement

For National Accounts estimates (Gross Domestic Product) Censuses and Surveys provides, among others, the following variables of basic statistics:

- Personnel directly employed by the firm
- Personnel not directly employed by the firm
- Remunerations
- Expenditures on goods and services consumption
- Expenditures not derived from the activity
- Revenues for services rendered and goods sold
- Revenues not derived from the activity
- Stocks
- Fixed assets
- Units and transport equipment
- Innovation and research

VII. – Turnover/output data methods and criteria for choosing various output methods

Generation of economic statistics (input for the calculation of National Accounts) and the generation of different indicators to measure economic evolution, is performed through an Integrated Surveys System in Economic Units, based on current legislation (LSNIEG, Article 22, paragraph II).

This system of surveys in economic units carried out monthly and annually, based on sample surveys; the monthly surveys covers basic variables, as employed personnel, wages, incomes and expenses, while the annual surveys covers structural variables: fixed assets, among others.

The output of travel agencies is measured as turnover. Data are collected for short-term and structural statistics; turnover is measured in thousands of Mexican pesos and the statistical observation unit is the establishment. At present turnover by product is not available.

VIII. - Evaluation of comparability of turnover/output data with price index practices

Currently, products of travel agencies do not form an integral part of the calculation of producer price indices.
